DRIVER ANALYSIS

Adam Cabot

+200

Adam Cabot is the undisputed favorite at Dover Motor Speedway - and for good reason. Nicknamed 'Concrete Cabot' by the SNR community, he has turned this track into his personal playground. Two wins in three Cup Series starts, 241 laps led all-time (the most of any driver in series history at this track), and an average running position of 1.9 across those starts. His S1 win came from P17 - he carved through the entire field. His S4 win came from pole where he led 134 of 200 laps in a dominant display. The S5 DC does not diminish the narrative - his pace in that race was again at the front. Dover Day in America has historically meant one thing: a Cabot victory. At +200 he is the shortest price on this board and the data demands it.

A.J. Stravato

+500

A.J. Stravato arrives at Dover as the hottest driver in the series - having won 2 of the last 3 SNR Cup Series races including back-to-back victories at Rockingham and Texas. The S6 points leader with 368 pts, Stravato is in the form of his career. His Dover history shows 4 starts with an ARP of 4.5 and 53 laps led - he has the short track pace to run at the front of this race. The short track resume is strong: 2 wins in 12 Cup Series starts, 8 top 5s, ARP 8.0. The momentum heading into Dover is undeniable. He is the most dangerous driver to challenge Cabot on current form.

Joshua Banks

+600

Joshua Banks is the only other driver in this field who has won at Dover in the SNR Cup Series. His S3 victory came from P7 leading 53 laps in a 43-car field - a genuine front-running win. Across 4 Dover starts his average running position is 3.0 and he has 3 top 5 finishes - the second best multi-race ARP profile at this track behind Cabot. His short track resume league-wide is deep: 4 wins in 20 starts, 538 laps led, ARP 6.5. 7th in S6 standings with 310 pts and a win at Darlington this season. He is the most credible challenger to both Cabot and Stravato.

Jeff J. Wright

+800

Jeff J. Wright has the most laps led of any driver at Dover across all SNR Cup Series seasons - 214 total. He won S5 Dover from pole leading 82 laps and led another 84 in S1 before a P9 finish - the results have not always matched the pace at this track. His short track Cup resume is the deepest in the field: 6 wins in 23 starts, 1,372 laps led, ARP 4.3. 8th in S6 standings with 309 pts and 3 wins this season. The laps led history at Dover tells you he belongs at the front - the question is whether he can convert pace to a result on race day.

Bailey Turner

+1000

Bailey Turner is one of the premier short track performers in SNR Cup Series history. 3 wins in 23 starts, 921 laps led, ARP 5.2 - only Wright surpasses him in short track laps led. His Dover history is thinner: 3 starts, best finish P6 in S1, ARP 7.0, only 3 laps led at the specific track. 2nd in S6 standings with 364 pts and 2 wins this season. The short track pedigree is undeniable but the gap between his broader short track dominance and Dover-specific results is the reason he sits behind the top three at +1000.

Seth Hatchel

+1100

Seth Hatchel is 5th in the S6 championship chase with 327 pts and has been one of the most consistent performers this season with 8 top 10s in 9 starts. His short track Cup record shows 8 starts with 1 win, 5 top 5s, and ARP 9.9 - solid front-running numbers. His only Dover start ended in a DC in S3. The lack of Dover history is the main uncertainty but his short track win confirms the ability is there. S6 form and short track pace make him a legitimate contender at +1100.

Chad Clinger

+1200

Chad Clinger has raced at Dover more times than almost anyone in this field - 5 starts - and his P2 finish in S5 stands as his best career result at the track. He came from P11 to finish second in that race. His short track resume is one of the more underrated in the field: 2 wins in 18 starts, 455 laps led, ARP 8.5. Those laps led numbers show genuine front-running ability at this track type. The boom-or-bust profile from Texas also applies here - when Clinger is on, he is very much on. 32nd in S6 with 154 pts.

Phillip Brewer

+1400

Phillip Brewer is a 4-time Challenger Series short track winner - the most Challenger Series short track wins of any driver in this price range - though he is still searching for his first SNR Cup Series short track win in 23 Cup starts. His 338 laps led on short tracks in Cup competition shows the pace is genuinely there. The Dover Cup record is a question mark - both his Cup starts ended in disqualifications. 6th in S6 standings with 320 pts and consistent throughout the season. The Challenger Series short track pedigree combined with S6 form makes him a credible contender at +1400.

J R Shepherd**+1500**

J R Shepherd has raced at Dover twice in the Cup Series and finished P4 both times - the definition of consistent front-running without winning. His ARP of 6.8 across those 2 starts confirms the pace is real. His short track laps led total of 312 in just 12 starts is a standout number - he runs at the front of short track races. 4th in S6 standings with 332 pts. If the Dover pattern holds he will be knocking on the door again - the missing piece is the win conversion.

Kenny Kibbey**+1600**

Kenny Kibbey has a P3 at S4 Dover from P27 start - a remarkable charge through the field. His 2 Dover starts show ARP 7.4. Short track record: 1 win in 13 Cup starts, 7 top 5s, 130 laps led, ARP 8.9 - one of the cleaner short track profiles in the mid-tier. 3rd in S6 standings with 362 pts and right in the championship hunt. The combination of S6 momentum and a demonstrated ability to run up front at Dover makes him a credible contender at +1600.

Andy Telgenhof**+1800**

Andy Telgenhof has only 1 Dover start in the Cup Series but it was a strong one - P5 in S4. His 2 wins in just 6 S6 starts puts him among the most efficient winners this season (17th in standings with 221 pts). Short track Cup history is limited at 5 starts but includes 1 win. The limited Dover and short track sample is the main constraint at +1800 - but the quality of results in those limited appearances is hard to dismiss.

Ryan Carwile**+2000**

Ryan Carwile is quietly one of the best Dover performers in this entire field. 3 top 5s in 4 Dover starts - P3 in S2, P4 in S4, P5 in S3 - a level of track-specific consistency that few drivers can match. His ARP of 8.3 across 4 starts backs it up. The short track Cup record is more modest (0 wins in 20 starts, ARP 10.1) but the Dover-specific finishing pattern is the story here. 24th in S6 with 177 pts in 7 starts. At +2000 the Dover track record represents genuine value.

Enathian Ferrada**+2200**

Enathian Ferrada led 64 laps at Dover across 2 Cup Series starts - an ARP of 5.5 that ranks among the best at this track. He led 56 laps in S3 before a DC that cost him what could have been a top result. The pace signal at Dover is genuine and does not match his odds. 15th in S6 standings with 223 pts. The short track Cup record (7 starts, ARP 12.3) is more modest but the Dover-specific numbers suggest a driver capable of running near the front on race day.

Angelo Hronis**+2500**

Angelo Hronis has one of the deeper short track top 10 resumes in the field - 10 top 10s in 18 Cup starts, ARP 11.8. He has appeared at Dover 3 times with mixed results including a P29 DC in S4. 11th in S6 standings with 275 pts in 8 starts. He runs consistently in the top 10 at short tracks but has not been able to put together a peak result. At +2500 the volume of top 10s makes him a reasonable inclusion in any multiple-driver prop.

Dakota Floyd2**+2800**

Dakota Floyd2 is a 2-time Challenger Series short track winner, though he is yet to win at short tracks in the SNR Cup Series. His 202 laps led in 21 Cup starts show genuine front-running pace at this track type. His Dover Cup results are weaker (3 starts, best finish P14, ARP 17.1) which creates a gap between his Challenger Series short track ability and his Cup track-specific history. 14th in S6 standings with 230 pts. The Challenger Series short track wins and laps led suggest his Cup Dover results may be underperforming his actual pace ceiling.

Noah Michalski**+3000**

Noah Michalski ran P7 at S2 Dover from P23 start - a strong result in his first Dover appearance. The S3 DC clouds the record. His short track Cup record shows 5 top 5s in 20 starts with ARP 10.8. He is also a dominant Challenger Series short track performer. 23rd in S6 with 188 pts in 7 starts. The S2 Dover result shows he can run up front when things go right at this track type.

Reggie Ortega**+3200**

Reggie Ortega ran P4 at S2 Dover - one of the stronger early-series results at the track. His 2 Dover starts show an ARP of 7.6. Short track Cup record: 14 starts, 1 top 5, ARP 12.5. 35th in S6 with 125 pts. The S2 Dover result is the standout data point that justifies the move up to +3200 on this board.

Casey Lakatos**+3500**

Casey Lakatos has the most consistent mid-field Dover record in this field - 3 top 10 finishes in 3 Dover starts. He has shown up at this track every time. Short track Cup record: 18 starts, 3 top 5s, ARP 13.2. 18th in S6 with 216 pts. He is not a win threat at +3500 but the Dover top 10 consistency makes him a solid inclusion in any finishing position props.

Rob Hamp**+3500**

Rob Hamp has 6 top 5 finishes in 18 short track Cup starts - one of the better non-win top 5 rates in this price range. His only Dover start ended in a DC in S4. The short track top 5 volume across a meaningful sample suggests front-running ability that his single Dover result does not capture. 30th in S6 with 157 pts. At +3500 the short track profile is the argument.

Chuck Sweeting**+3800**

Chuck Sweeting has been to Dover 4 times in the Cup Series and has results to show for it - P5 in S1, P9 in S3. He is also a 1-time Challenger Series short track winner, though his Cup short track record of 27 starts and 54 laps led has not yet produced a Cup Series win at this track type. 13th in S6 with 238 pts. The dual Dover top 10s in the first two seasons show he is capable of running in the front group at this track.

Bryce Shoemaker**+4000**

Bryce Shoemaker has 4 Dover starts with a best finish of P10 in S3. He is a 1-time Challenger Series short track winner, though he has not yet converted that into a Cup Series short track win across 28 Cup starts. His 135 laps led in Cup short track competition shows genuine front-running ability at this track type. 21st in S6 with 192 pts. The combination of multiple Dover appearances and Challenger Series short track credentials gives him a more credible profile than his +4000 price might suggest.

Eldon Stewart2**+4200**

Eldon Stewart2 has no Dover Cup Series history to reference. He has 9 S6 starts and sits 38th in the standings with 101 pts. The lack of short track or Dover data makes this a pure S6 form play at +4200. He has shown enough consistency in the current season to earn a mid-range long shot price.

Caleb Weekley**+4500**

Caleb Weekley has more Dover starts than any driver in this field - 5. He has been a regular at this track throughout the series and is also a 1-time Challenger Series short track winner, though a Cup Series short track win has eluded him across 31 Cup starts. His best Dover finish is P9 in S5 and his ARP of 18.3 across those starts reflects a driver who has been more of a volume accumulator than a front-runner at Dover specifically. 10th in S6 with 284 pts. The most experienced Dover driver on the field outside of the top tier.

Rhea Massey**+5000**

Rhea Massey has a P3 finish at S3 Dover - a genuine top result at this track. He has 4 Dover starts total and a short track Cup win on his resume. His ARP of 10.3 across 17 short track starts shows consistent front-running ability. 31st in S6 with 156 pts. The P3 Dover result is the key data point that makes him more than a pure longshot at +5000.

Justin Richie**+5000**

Justin Richie is 9th in the S6 championship standings with 297 pts - current season form is his primary argument at Dover. His only Dover Cup start ended in a DC in S3. Short track Cup record: 13 starts, ARP 10.7, 3 top 10s. The S6 points position and consistent season suggests a driver who knows how to finish races, but the lack of positive Dover history limits the ceiling.

Elliott Butler**+5500**

Elliott Butler sits 12th in S6 standings with 268 pts. His Dover record includes 2 starts - P14 in S4 is his best result. Short track Cup record shows 10 starts with 3 top 10s, ARP 13.8. A steady mid-field performer throughout S6 without a peak result to point to at this track type.

Christopher Hodges**+6000**

Christopher Hodges has a surprising Dover record for a driver at this odds range - 3 top 10 finishes in 3 starts. His best Dover finish is P8 in S3. The consistency at this specific track across 3 visits is notable. 16th in S6 with 222 pts. Short track ARP of 19.8 in 18 starts is the limiting factor but the Dover top 10 pattern earns him a spot ahead of many drivers with fewer track finishes.

Kyle Peacock**+6000**

Kyle Peacock has 1 Dover Cup Series start - a P43 DC in S1. His S6 campaign has been limited to 3 starts (44th, 74 pts). At +6000 this is a deep long shot play with minimal data to anchor the price.

Max Kost**+6500**

Max Kost has 4 Dover Cup Series starts with a best finish of P15 in S3. He has 30 short track Cup starts with 1 top 5 and ARP 17.2 - consistent but never threatening the front. 19th in S6 with 210 pts. Volume at both the track and the track type without peak results.

Austin Boelke**+6500**

Austin Boelke has 5 Dover Cup Series starts - has been a fixture at this track since S1. Best finish P12 in S1. He is also a 1-time Challenger Series short track winner, though a Cup Series short track win has not yet come across 29 Cup starts. 20th in S6 with 196 pts. Has the track experience but results have not matched the exposure.

Brandon Wallace**+7000**

Brandon Wallace has 4 Dover Cup Series starts with a best finish of P13 in S2. 25th in S6 with 175 pts. Short track Cup record: 29 starts, 1 top 5, ARP 19.6. A regular presence at this track type without ever threatening the front group.

Brian Chambliss**+7000**

Brian Chambliss finished P11 at S4 Dover in his best career result at the track. 2 Dover starts total. 34th in S6 with 127 pts in 7 starts. Short track Cup record: 10 starts, ARP 19.2. The P11 Dover result is the standout number in an otherwise modest profile.

Matt Shinoski**+7000**

Matt Shinoski has 2 Dover Cup Series starts with P12 in S4 his best result. 28th in S6 with 165 pts. Short track: 21 starts, 1 top 5, ARP 20.8. Has visited Dover before and posted a respectable mid-field finish in S4.

Ben Laughter**+7500**

Ben Laughter finished P9 at S4 Dover - a top 10 result that represents a career highlight at this track. 2 Dover starts total. 22nd in S6 with 189 pts. Short track Cup: 20 starts, 2 top 5s, ARP 14.6. The S4 Dover top 10 shows he has run well at this track before.

Stefan Davis**+8000**

Stefan Davis has 3 Dover Cup Series starts with an ARP of 25.0 - he has consistently struggled at this track. 25th in S6 with 175 pts. Short track Cup: 23 starts, ARP 19.0. The Dover-specific data makes it difficult to argue for a better price at this track.

Logan Threlkeld**+8000**

Logan Threlkeld has 2 Dover Cup Series starts, both outside the top 20. 48th in S6 with 26 pts in 3 starts. Short track: 9 starts, 1 top 10, ARP 17.3. Very limited S6 participation limits the data available.

Mikal Jones**+8000**

Mikal Jones has no Dover Cup Series history. His short track Cup record shows 10 starts with 1 top 5 and ARP 22.7. 33rd in S6 with 137 pts. Without track-specific history this is purely a current form and track type play.

Keith Shoemaker**+8500**

Keith Shoemaker has raced at Dover 3 times in the Cup Series with an ARP of 29.7 - he has specifically struggled at this track. 37th in S6 with 112 pts. The Dover-specific numbers are among the weakest of any multi-start driver at this track.

Broderick Vaclavik**+8500**

Broderick Vaclavik has no Dover Cup Series history. 29th in S6 with 160 pts. His short track Cup record (7 starts, ARP 20.5) is modest. Without track history this is a long shot based purely on general S6 presence.

James Lehman**+9000**

James Lehman has 2 Dover Cup Series starts - both ended in DCs. Notably his ARP of 8.3 suggests he was running near the front of both races before the issues. 40th in S6 with 93 pts. The pace signal in a DC result is worth noting even if the finishing record is blank.

John Seniw**+9000**

John Seniw has 1 Dover Cup Series start - a P30 DC in S5. 43rd in S6 with 82 pts. Short track: 14 starts, 2 top 5s, 19 laps led. The short track top 5s are the most interesting data point in an otherwise limited profile.

Bryan Dehn**+9000**

Bryan Dehn has 1 Dover Cup Series start - P35 DC in S3. 41st in S6 with 89 pts in 4 starts. Very limited data across the board makes this a deep long shot price.

Justin Carey2**+9000**

Justin Carey2 finished P13 at S4 Dover in his only Cup Series start at the track - a respectable mid-field result from a 200-lap race. 39th in S6 with 100 pts in 5 starts. The P13 is the most positive data point in his profile at this track.

Tim Shinoski**+9500**

Tim Shinoski has no Dover Cup Series history. 7 short track Cup starts, 36th in S6 with 113 pts in 7 starts. Without track-specific data this is a pure long shot at the back of the board.

Derek M Garrison**+9500**

Derek M Garrison has 1 Dover Cup Series start - P33 DC in S3. 45th in S6 with 61 pts in 2 starts. Very limited league and track history makes this a deep long shot price.

Justin Michael**+9500**

Justin Michael has no Dover Cup Series history. 46th in S6 with 48 pts in just 3 starts. Minimal data across the board.

Mark McFadyen**+9500**

Mark McFadyen has 3 Dover Cup Series starts with all finishes well outside the top 15 and an ARP of 26.0. 42nd in S6 with 83 pts. Short track: 17 starts, ARP 23.6. The track-specific history does not support a better price.

Logan Watern**+10000**

Logan Watern has no Dover Cup Series history and minimal league history - 50th in S6 with 4 pts from 1 start. This is the maximum long shot price on the board.
